HP Docket No. 10007660-1

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-6. (Canceled)

7. (Currently amended) In a client server system that includes a server connected to a client, a method comprising:

(a) transmitting, by the server, a set of executable instructions to a client, where the set of executable instructions is an agent of a particular printer;

(b) receiving, by the client, the set of instructions;

(c) executing, by the client, the set of instructions to:

generate a print job;

transmit the print job to the printer;

display a print status page as the printer prints the print job, where the print status page describes a present status of the print job while the printer prints the print job.

8. (Previously presented) The method of claim 7, wherein the printer comprises the server.

9. (Previously presented) The method of claim 7, wherein the server is a Web Server and the client is a Web Client.

10. (Previously presented) The method of claim 7, wherein executing the set of instructions causes the client to:

generate a generic access request to retrieve a set of data that describes an image; and

HP Docket No. 10007660-1

use the retrieved set of data to generate the print job.

11. (Currently amended) In a computing system that includes a computer connected to a printer, a method comprising:

(a) receiving, by the printer, a request from the computer;

(b) responding, by the printer, to the request by transmitting a set of executable instructions to the computer;

wherein the set of executable instructions enables the computer to generate and to then transmit a print job to the printer;

wherein the set of executable instructions further enables the computer to display a print status ~~page~~ while the printer is printing the print job;

wherein the print status ~~page~~ indicates a present status of the print job while the printer prints the print job.

12. (Currently amended) The method of claim 11,

(c) receiving, by the computer, the executable set of instructions;

(d) executing, by the computer, the executable set of instructions to:

(i) generate and transmit a print job to the printer; and

(ii) display a print status ~~page~~ while printer is printing the print job.

13-23. (Canceled)

24. (New) A printer adapted to connect to a computer, comprising:

a communication port configured to receive a request from the computer;

a server module configured to respond to the request by transmitting a set of executable instructions to the computer;

wherein the set of executable instructions enables the computer to generate and to then

HP Docket No. 10007660-1

transmit a print job to the printer;

wherein the set of executable instructions further enables the computer to display a print status while the printer is printing the print job;

wherein the print status indicates a present status of the print job while the printer prints the print job.

25. (New) The printer of claim 24, wherein the print status is dynamically updated while the printer prints the print job.

26. (New) The printer of claim 24, wherein the printer and the computer are connected over a network.

27. (New) A server adapted to connect to a computer, comprising:
a communication port configured to receive a request from the computer;
a module configured to respond to the request by transmitting a set of executable instructions to the computer;
wherein the set of executable instructions enables the computer to generate and to then transmit a print job to a printer;
wherein the set of executable instructions further enables the computer to display a print status while the printer is printing the print job;
wherein the print status indicates a present status of the print job while the printer prints the print job.

28. (New) The server of claim 27, wherein the server is provided in the printer.

29. (New) The server of claim 27, wherein the print status is based upon dynamic input received from the printer.

HP Docket No. 10007660-1

30. (New) A client adapted to connect to a server, comprising:
a communication port configured to receive, from the server, a set of executable instructions that is an agent of a particular printer; and
a processor configured to execute the set of instructions to:
generate a print job;
transmit the print job to the printer;
display a print status as the printer prints the print job, where the print status describes a present status of the print job while the printer prints the print job. .

31. (New) The client of claim 30, wherein the printer comprises the server.
